

# MATLAB for Managing Workflows

Thomas Anthony  
Intern, IT Research Computing  
Dept. of Electrical Engineering

# MATLAB

- MatLab (Matrix Laboratory)
- High-level language for technical computing
- Interactive environment for algorithm development, data visualization, data analysis, and numeric computation
- Solve technical computing problems faster than with traditional programming languages, such as C, C++, and Fortran

# MATLAB - TAH

- ◆ In January 2011, UAB acquired a site license for MATLAB that allows faculty, staff, post-docs, and graduate students to use MATLAB, Simulink, and 42 toolboxes (including the parallel toolbox) for research activities on campus and personal systems.
- ◆ DCS – 128 nodes on the Cheaha

# Downloading & Installing MATLAB

- ◆ [Create an account at the Mathworks site](#) using your campus @uab.edu email address.
- ◆ Request an [activation key](#).
- ◆ Associate your Mathworks account with the campus-wide MATLAB license using your activation key.
- ◆ Download the software from the [mathworks download site](#) and install MATLAB (contact asset managers for download rights)
- ◆ Activate the software using the activation scenario that best suits your particular needs.

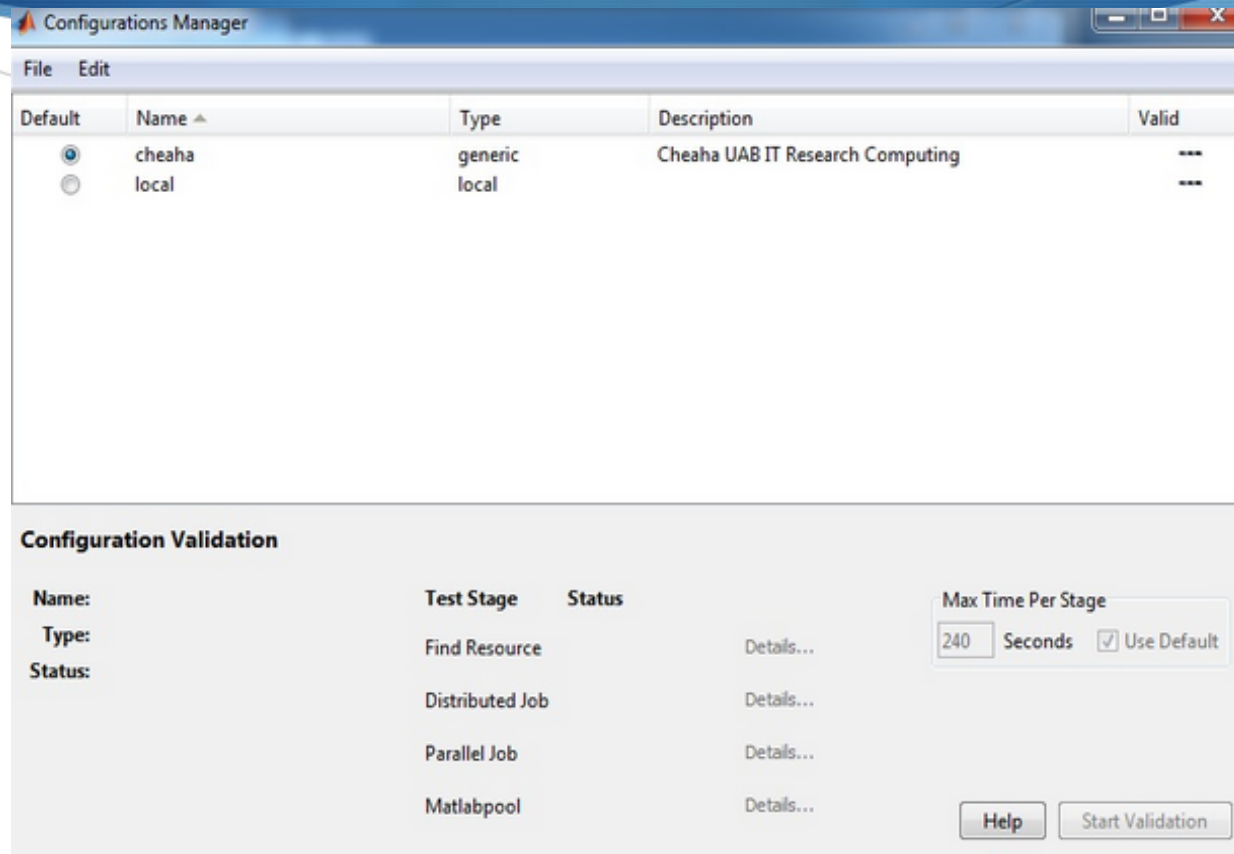

# MATLAB Installation Scenarios

- ◆ **Simplified MATLAB Install** – For computers that remain connected to the campus network. This installation requires MATLAB software to be installed on your computer and provides a simple 2-line file to activate the software.
- ◆ **MATLAB Designated Computer Install** - For systems which may not have network access when MATLAB is being used. This install type authorizes an individual computer to run MATLAB, allowing MATLAB to run regardless of where the computer is located.

# Configure MATLAB

- ◆ [Install MATLAB](#) with the Parallel Computing Toolbox on your Windows / Linux / Mac workstation
- ◆ Download and extract the MATLAB task submission functions to your workstation MATLAB environment
- ◆ Define the "cheaha" parallel configuration in your workstation MATLAB environment to submit tasks to Cheaha
- ◆ Run the validation tests to ensure your "cheaha" parallel configuration works

# Configuration Manager

The screenshot shows the Configuration Manager application window. The window title is "Configurations Manager". It has a menu bar with "File" and "Edit". The main area contains a table with the following data:

| Default                          | Name ^ | Type    | Description                      | Valid |
|----------------------------------|--------|---------|----------------------------------|-------|
| <input checked="" type="radio"/> | cheaha | generic | Cheaha UAB IT Research Computing | ---   |
| <input type="radio"/>            | local  | local   |                                  | ---   |

Below the table is a "Configuration Validation" section. It includes labels for "Name:", "Type:", and "Status:". To the right, there is a table with "Test Stage" and "Status" columns, and a "Max Time Per Stage" section with a text box containing "240", the unit "Seconds", and a checked checkbox for "Use Default". At the bottom right, there are "Help" and "Start Validation" buttons.

| Test Stage      | Status     |
|-----------------|------------|
| Find Resource   | Details... |
| Distributed Job | Details... |
| Parallel Job    | Details... |
| Matlabpool      | Details... |

Max Time Per Stage:  Seconds  Use Default

Buttons: Help, Start Validation

# Cheaha Parallel Configuration

Generic Scheduler Configuration Properties

Configuration name: cheaha

Description: Cheaha UAB IT Research Computing

Scheduler Jobs Tasks

Scheduler type (Type): generic

Root folder of MATLAB installation for workers (ClusterMatlabRoot): /share/apps/mathworks/R2011a

Number of workers available to scheduler (ClusterSize): 8

Folder where job data is stored (DataLocation): C:\Users\YOURUSERNAME\Documents\MATLAB

Function called when submitting parallel jobs (ParallelSubmitFcn): {@parallelSubmitFcn, 'cheaha.uabgrid.uab.edu', '/lustre/scratch/YOURUSERID/matlab'}

Function called when submitting distributed jobs (SubmitFcn): {@distributedSubmitFcn, 'cheaha.uabgrid.uab.edu', '/lustre/scratch/YOURUSERID/matlab'}

Function called when canceling a job (CancelJobFcn):

Function called when canceling a task (CancelTaskFcn):

Cluster nodes' OS (ClusterOsType): unix

Function called when destroying a job (DestroyJobFcn): @destroyJobFcn

Function called when destroying a task (DestroyTaskFcn):

Function called when getting the job state (GetJobStateFcn): @getJobStateFcn

Job data location is accessible from both client and cluster nodes (HasSharedFilesystem): False

OK Cancel Help

# Validation

The screenshot shows the 'Configurations Manager' application window. The main area contains a table with the following data:

| Default                          | Name ^ | Type    | Description                      | Valid |
|----------------------------------|--------|---------|----------------------------------|-------|
| <input checked="" type="radio"/> | cheaha | generic | Cheaha UAB IT Research Computing |       |
| <input type="radio"/>            | local  | local   |                                  | ---   |

Below the table is the 'Configuration Validation' section for the selected 'cheaha' configuration:

**Name:** cheaha  
**Type:** generic  
**Status:**

| Test Stage      | Status | Details...                 |
|-----------------|--------|----------------------------|
| Find Resource   | Passed | <a href="#">Details...</a> |
| Distributed Job | Passed | <a href="#">Details...</a> |
| Parallel Job    | Passed | <a href="#">Details...</a> |
| Matlabpool      | Failed | <a href="#">Details...</a> |

Max Time Per Stage:  Seconds  Use Default

[Help](#) [Start Validation](#)

# Demo

- ◆ Serial job
- ◆ Offload the serial job to Cheaha
- ◆ Convert serial job to parallel and run it locally
- ◆ Offload the parallel job to Cheaha
- ◆ Distributed Job
- ◆ Small shell script using MATLAB
